EDUCATION

The University of Edinburgh

Bachelor of Science (Honours) in Computer Science

Edinburgh, United Kingdom

Expected Graduation: July 2026

- *Relevant Courses:* Algorithms and Data Structures, Compiling Techniques, Machine Learning Practical, Distributed Systems, Natural Language Processing, Computer Systems, Computer Networks, Software Testing
- *Predicted Results:* **First Class Honours**

TECHNICAL SKILLS

Languages: Java, Python, Swift, JavaScript, TypeScript, Scala, SQL (PostgreSQL), HTML, CSS

Libraries: React, Matplotlib, pandas, scikit-learn, OpenCV, Pytesseract, Tensorflow, Keras

Frameworks: Node.js, Spring Boot, Apache Spark, FastAPI, Flask, SwiftUI, Apple Core Data, Apple HealthKit

Tools & Platforms: Git, GitHub Actions, Supabase, Docker, Postman, Google Cloud Platform, Linux, Twilio

EXPERIENCE

Pera (Pirum Group Ltd.)

Software Engineering Intern

London, United Kingdom

June 2025 – August 2025

- Developed RESTful microservices in Python (FastAPI), integrating user endpoints with PostgreSQL and Qdrant for vector-based semantic matching, alongside a **Redis** caching layer reducing query latency from **~10s** to **<100ms**
- Implemented an SMS-based 2FA workflow using **Twilio** API, removing credential friction and simplified user onboarding from **5** steps to **2**; integrated GitHub Actions CI/CD for automated testing and **GCP** deployment

Keysight Technologies

Software Engineering Intern

Penang, Malaysia

June 2024 – September 2024

- Developed a Request Tracking & Approval system within an **Agile** Scrum team, automating email-based workflows for **30+** Knowledge Engineers handling **~5,000** monthly requests; reduced resolution time from **5** days to **1** day
- Implemented batch data processing pipelines, reducing upload times for **500** items from **30** minutes to **30** seconds
- Spearheaded the development of a custom **SQL** Code Generator Tool with dropdown-based table selection, enabling non-technical staff to query product items across **50+** tables with **10,000+** records

PROJECTS

Distributed Compute Cluster & Storage Engine | *Python, gRPC*

- Engineered a distributed compute engine in **Python** using **gRPC**, processing **3.5M+** primes/sec across nodes
- Architected a custom **AFS**-inspired distributed file system featuring client-side caching and Primary-Backup replication, optimizing read latency and maintaining continuous availability (**>99.9%**) during single-node failures

AI-Driven Adaptive Coursework Planning System | *React, TypeScript, PostgreSQL, LangChain, Qdrant*

- Developed a study platform using **React** + **FastAPI**, using **multimodal RAG** with **Gemini 2.0** + **LangChain** to generate dynamic coursework roadmaps; integrating **Qdrant Cloud** for efficient multimodal semantic retrieval
- Implemented local image caching to minimize API costs and latency, resulting in **<1s** latency for complex queries
- Integrated user progress tracking using **PostgreSQL** with **JWT**-based auth, reducing login times by **50%**

High-Performance Sparse Matrix & Tensor Multiplication Engine | *Scala, Apache Spark*

- Implemented a distributed sparse matrix & tensor multiplication engine using **Apache Spark** with **5** storage formats for matrix representations, achieving **28-36x** compute speedup using CSF compression vs baseline formats
- Eliminated network shuffles via co-location partitioning on join dimensions, reducing PageRank latency by **2.5x**
- Implemented kernel fusion combining matrix-vector operations in single pass, resulting in **6.4x** speedup vs baseline

LEADERSHIP

JPMorgan Chase - Code For Good 2025 Hackathon

Front-End Team Lead

Glasgow, United Kingdom

Oct 2025

- Led the development of an AI-based recommendation system for nonprofits at JPMC's annual flagship hackathon

Edinburgh University Trading and Investment Club (EUTIC)

Head of Technology

Edinburgh, United Kingdom

August 2025 - Present

- Led the technology infrastructure behind the UK's largest student-led investment fund (**>£94,000** in AUM)
