EDUCATION

The University of Edinburgh

Bachelors of Science (Honours) in Computer Science

Edinburgh, United Kingdom

Expected Graduation: May 2026

- *Relevant Courses:* Algorithms and Data Structures, Distributed Systems, Software Engineering, Machine Learning Practical, Natural Language Processing, Computer Systems, Computer Networks, Software Testing
- *Predicted Results:* On track for **First-Class Honours**

TECHNICAL SKILLS

Languages: Java, Python, Swift, JavaScript, TypeScript, Haskell, SQL, C, HTML, CSS

Libraries: React, Tensorflow, Keras, Matplotlib, pandas, scikit-learn, OpenCV, Pytesseract

Frameworks: Flask, FastAPI, Node.js, Spring Boot, Apple Core Data, Apple HealthKit, JUnit, Bootstrap

Developer Tools & Platforms: Git, GitHub Actions, Linux, Supabase, PostgreSQL, Twilio, Docker, Postman, Vercel

EXPERIENCE

Pera

Software Engineering Intern

London, United Kingdom

June 2025 – August 2025

- Engineered the backend for Becca, a centralized **Flask-based** system connecting Pera's web presence to an **AI core** via a shared **PostgreSQL** database, designed to support **100+** concurrent user interactions in real time
- Integrated **Supabase** and **Twilio** for 2FA and email auth, reducing onboarding time by **65%** for **100+** users
- Collaborated with founders in a fast-paced startup environment to drive product direction and technical decisions

Keysight Technologies

Software Engineering Intern

Penang, Malaysia

June 2024 – September 2024

- Designed, developed and deployed a scalable approval-based **request tracking system**, automating the process of tracking **100+** weekly product service requests handled by **30+** Knowledge Engineers company-wide
- Engineered a **batch data processing pipeline** for product item uploads, reducing processing times by over **90%**
- Spearheaded the development of a custom **SQL Code Generator Tool**, enabling non-technical staff to query data from the **Microsoft SQL Server** Relational Database System consisting of over **10,000** records within **50+** tables

PROJECTS

HealthMY - AI-Assisted Health Manager App | Swift, CoreData, HealthKit, FastAPI

June 2025 – Present

- Founded and engineered an iOS-based health management platform to help users track health metrics such as blood pressure and pulse, tested by **20+** users globally
- Integrated **AI-driven insights** using **LLMs** for trend analysis and wellness insights based on live health data provided through **Apple HealthKit** user data integration

CardGPT - AI-Powered Card Generator Tool | React, Python, Flask

Jan 2025 – Mar 2025

- Developed a full-stack web app using **React** and **Flask** to generate printable cards for a card matching game
- Integrated **Google Gemini 2.0-turbo** LLM to generate semantically similar **AI-generated** word pairs for playing cards, retrieving accurate word pairs in **under 1.5 seconds** with **>95%** consistency

PizzaDronz - Drone Delivery System | Java, Spring Boot, Maven, Docker

Oct 2024 – Jan 2025

- Developed a **REST API** in **Spring Boot** to validate orders and calculate flight paths for a drone delivery system
- Implemented the **A* search algorithm** to calculate optimal flight paths within a **2km²** area, consistently returning results in under **150ms** with in-device caching

LEADERSHIP

Hack The Burgh X Hackathon, CompSoc Edinburgh

Event Volunteer

Edinburgh, United Kingdom

March 2024

- Coordinated the efficient registration process of **over 200+** hackathon participants, ensuring smooth event flow

MSTC 23' Technology Conference, Young Malaysian Engineers

Events and Projects Officer

Kuala Lumpur, Malaysia

May 2023 – Aug 2023

- Handled the logistics for the Malaysian Students' Technology Conference, featuring talks by top tech companies
